POTATOES AND SWEETPOTATOES

Production and Disposition by States -- 1975 and 1976 Utilization -- 1974, 1975 and 1976

This publication presents estimates of acreage, yield per acre, production, farm disposition, season average price, value and utilization of sales including processing. First of the month estimates (December thru April) of total stocks of potatoes for all fall crop States except Nevada are also included for the 1975 and 1976 crop years. Production, disposition and value data for Alaska are included separately.

The final 1976 crop estimates are based primarily on information furnished by crop reporters and cooperating State or Federal agencies. This includes annual State farm census data in some States, check data--such as Market News Service rail and truck shipments and unloads, Federal-State inspections--and miscellaneous data available through various marketing programs.

Price estimates represent average returns to growers for all uses and methods of sale. These prices are applied to production to compute value of production and to the quantity sold to compute value of sales. The difference is accounted for by farm use for seed, feed and home use and shrinkage and loss. The published United States season average price is obtained by weighting State prices by quantities sold. A United States price based on value of production can be derived by dividing the United States value of production by the United States production.

Potato production for each State except Alaska has been classified by seasonal group according to the period or periods when the largest supplies are usually harvested. All State estimates of acreage, yield per acre, production, farm disposition, price and value are combined for each season. Utilization estimates by State are not provided. For Alaska, no seasonal classification is made. The four seasonal groups are as follows:

<u>SEASON</u>	<u>USUAL TIME OF HARVEST</u>
Winter	January through March
Spring	April through June
Summer	July through September
Fall	October through December

The beginning and end of these seasons are not fixed dates but are approximations because there is necessarily some overlapping of harvest before or after the specified season. Generally, the marketing season follows closely the harvesting season except for the fall crop where marketing from storage may extend through July of the following year.

UTILIZATION OF 1976 CROP WITH COMPARISONS

Total sales of 1976 crop potatoes accounted for 324.3 million cwt., up 11 percent from the 291.2 million cwt sold from the 1975 crop. Fresh market sales from the 1976 crop accounted for 34 percent of total production, sales for processing accounted for 49 percent while other sales totaled 8 percent. Use of potatoes on farms where grown including shrinkage and loss accounted for the remaining 9 percent of the 1976 crop.

Shrinkage and loss at 26.2 million cwt. compares with 22.0 million cwt. estimated for the 1975 crop and 32.4 million cwt for the frost damaged 1974 crop. Shrinkage and loss amounted to 7.3 percent of the total production in 1976, compared with 6.9 percent for the 1975 crop and 9.5 percent of the 1974 production.

Potatoes sold for table stock from the 1976 crop totaled 122.9 million cwt., up 10 percent from the 112.1 million cwt. a year ago but 2 percent below the 1974 crop.

Quantities used in processing for frozen french fries accounted for 76.4 million cwt. compared with 70.6 million cwt. a year ago. Other frozen products used 16.2 million cwt. compared with 9.3 million cwt. utilized from the 1975 crop.

Fresh potatoes from the 1976 crop used for chips and shoestrings totaled 34.5 million cwt., up 1 percent from the 34.1 million cwt. used from the 1975 crop. The quantity used for chips and shoestrings in the fiscal year July 1, 1976 through June 30, 1977 was 34.9 million cwt compared with 34.1 million cwt. a year earlier and 33.0 million cwt. for the year ended June 30, 1975. In the period July 1 - June 30, some chipping potatoes from the new winter and spring crops are included.

Seed usage on farms where grown at 5.1 million cwt. was up 3 percent from the 4.9 million cwt in 1975. Total quantities from the 1976 crop used for seed was 25.5 million cwt, down 1 percent from the 1975 crop seed used.
